

Winter conditions expose any weaknesses in old or poorly installed roofs. An application of a patch is like putting a plaster on a broken leg.

Protan PVC Roofing Systems have proven durability in the harshest climates spanning over 40 years. Our materials can be installed throughout the winter months as they were originally designed for application in the Nordic climate.

Installed by our network of **Licensed Domestic Contractors**, Protan systems are suitable for all types of flat roofs and fully supported pitched roofs.

PROTAN DOMESTIC ROOFING

Is your home protected this winter?

Protan Single Ply Domestic Roofing Systems

Whatever your flat roofing need, call us today quoting 'Winter Roofing' and our local Contractor will be pleased to carry out a survey, take you through our proposed solution and provide a quotation.
