

**About Trespa**

Trespa International B.V. is a leading innovator in the field of architectural materials, recognised internationally as the premier developer of HPL panels and related building systems. Founded in 1960 and with headquarters in the Netherlands, Trespa manufactures high-performance Trespa® panels for the worldwide market.

Trespa's focus is on product development, combining quality manufacturing technologies with intelligent solutions for architectural applications. Our global sales organization is complemented by a network of local agents and distributors, bringing regional insights to each customer's needs.

**DISCLAIMER**

**General**

These terms apply to the use of this document and such use automatically means that the other party agrees to these terms. The information provided by Trespa International B.V. ("Trespa") in this document is solely indicative. Trespa is unable to warrant the accuracy and completeness of this information. Trespa may change the information included in this document at any time and without further notice. Trespa's customers and third parties must ascertain that they have the most recent document (for the most recent version, please consult: [www.trespa.com](http://www.trespa.com)). No rights can be derived from the information provided; the use of the information is at the other party's risk and responsibility. Trespa does not warrant that the information in this document is suitable for the purpose for which it is consulted by the other party. This document does not contain any design, structural calculation, estimate or other warranty or representation that customers and third parties may rely on. This document does not guarantee any properties of Trespa products. Colours used in Trespa's communications (including but not limited to printed matter) and in samples of Trespa's products may differ from the colours of the Trespa products to be supplied. Samples are not intended for use in product tests and are not representative of characteristics of the Trespa

products. Trespa's products and samples are produced within the specified colour tolerances and the colours (of production batches) may differ, even if the same colour is used. The viewing angle also influences the colour perception. Metallic panels feature a surface whose colour appears to change based on the direction from which it is viewed. The specified colour stability and colour specifications relate only to the decorative surface of the Trespa products, not to the core material and samples of the Trespa products. Trespa products are delivered ex-works with straight, sawn sides. Customers and third parties must have a professional adviser inform them about (the suitability of) the Trespa products for all desired applications and about applicable laws and regulations. Trespa does not warrant the above. The most recent version of the current delivery programme and the Material Properties Datasheet can be found at [www.trespa.info](http://www.trespa.info). Only the information in the most recent and valid Material Properties Datasheet should be used to select and provide advice regarding Trespa products. Trespa reserves the right to change (the specifications for) its products without prior notice.

Version 3.0

# TRESPA® TOPLAB<sup>PLUS</sup>® – A CHOICE FOR CLEAN AND STERILE WORK SURFACES

Today's laboratory demands compliance with rigorous codes and standards. Therefore, selecting the right material for laboratory worktops and furniture is of crucial importance because tests and experiments depend on non-contaminated environments.

Developed especially for laboratory environments, Trespa® TopLab<sup>PLUS</sup>® remains aesthetically pleasing while offering a high standard of hygiene, strength and durability for diverse surroundings such as chemical, analytical and biological laboratories. Trespa's underlying technology transforms wood-based fibres with thermosetting resins, under high pressure and at high temperatures, into robust compact laminate panels that meet the most challenging specifications. Trespa's unique in-house technology, Electron Beam Curing (EBC), ensures that each panel surface is easy to clean and resistant to a large number of aggressive chemicals.

## Clean surface

In an environment where hygiene and avoidance of contamination is key, Trespa® TopLab<sup>PLUS</sup>® provides an ideal choice. Thanks to its unique closed surface composition, the product shows significantly low dirt pick up, is impervious to mould and rot, and is resistant to non-abrasive organic cleaning solvents – thus making the product easy to clean and disinfect.

## Chemical resistance

Used extensively in a wide variety of laboratories worldwide, including chemical, analytical, microbiological and educational laboratories, Trespa® TopLab<sup>PLUS</sup>® is resistant to a large number of aggressive chemicals as identified by SEFA (Scientific Equipment and Furniture Association) if cleaned within 24 hours.

## Antimicrobial performance

Trespa® TopLab<sup>PLUS</sup>® has inherent antibacterial properties without the addition of microbial additives. An independent test by British Industrial Microbiological Services Ltd. (IMSL) shows an almost complete elimination of certain bacteria after 24 hours.<sup>1</sup>

## Long life time

Trespa® TopLab<sup>PLUS</sup>® is a versatile material featuring incredibly durable surfaces. Engineered for moisture and impact resistance, the product retains its aesthetical appeal throughout its lifetime. This is why Trespa® TopLab<sup>PLUS</sup>® is used for work surfaces, shelves and cabinet construction in laboratories around the world.

## Design flexibility

Today's laboratory is fast-paced and professional. With a dense and homogeneous core, Trespa® TopLab<sup>PLUS</sup>® can be machined similar to high quality hardwood using standard carpentry tools – leaving crisp, clean edges and uniform openings. Trespa products can also be easily retrofitted in the field for new taps, sinks and other equipment, without compromising performance or appearance. Trespa® TopLab<sup>PLUS</sup>® is available in several thicknesses, colours and sizes. Using Trespa's carefully selected panel sizes, laboratories can be designed allowing for material optimization and reduced number of joints for various applications.

<sup>1</sup> E-coli and Staphylococcus aureus have been tested following the Japanese Industrial Standard JIS Z 2801:2000. The number of colony forming units (cm<sup>2</sup>) on product surface has been reduced by 99.99% after 24 hours for both tests.

## Respect for our environment

Trespa strongly believes that any change should start with the company itself. Trespa's approach towards sustainability starts from an objective and fact based analysis of its environmental footprint along the entire value chain, including a recurring Life Cycle Analysis (LCA) according to ISO 14040. Trespa continuously strives to reduce its impact on the environment, by reduction of upstream contributions from raw material production and transport, onsite emissions, and primary energy use. For the latest status, please visit [trespa.com](http://trespa.com).
